

Introduction to Data Science & Big Data Analytics

Software Installation

If you have any problems with the installation process below, please email me at: victor.tan.33@gmail.com

1 Excel

You will need any of the following latest versions of Excel:

Excel 2021 or Office 365

You will need to install the Analysis ToolPak in Excel. The two links below provide an equivalent way of doing it:

<https://www.howtoexcel.org/install-analysis-toolpak/>
<https://www.excel-easy.com/data-analysis/analysis-toolpak.html>

2 Notepad++

You will need a reasonably good text editor to examine the CSV files.

For Windows, there are many options, and I would recommend you use NotePad++

<https://notepad-plus-plus.org/downloads>

From the page above, select the latest version of NotePad++ at the top and then download the Installer (exe) for Windows.

Download Notepad++ x64

See malicious ads here? Help us remove them!

• Installer (exe) | GPG Signature

Double click on the downloaded exe to begin the installation process, accepting all the standard defaults.

3 Google / Mail account for Google BigQuery

You will need a standard Google account (which comes with your GMail address, if you have one). We will use this to access the Google BigQuery facility that allows us to demonstrate Big Data functionality. If you don't have a Google account or GMail address, you can create one:
